

## **ENVIRONMENT POLICY**

The company is committed to being environmentally friendly and will;

- Ensure it meets or exceeds relevant environmental legislation.
- Endeavour to reduce waste consumption of resources through recycling.
- Act in the reduction of waste of energy through encouraging staff to turn off appliances, heating and lighting when not required.
- In respect of buildings occupied, seek premises that actively reduce or eliminate polluting releases to the environment.
- Actively consider alternative suppliers that are environmentally friendly.
- Seek to reduce its carbon footprint through support of Tree Appeal
- Promote awareness among our employees and encourage them to understand the company policy and seek their active support to implement it.

### **Community Tree Planting Programmes**

One method by which the company is supporting its environment policy is through community tree planting programmes. The company regards itself as a responsible organisation and recognises the effect planting native British broad-leaved trees can have on the company's environmental footprint.

Every copy of "this policy issued" plants one tree which contributes to the offsetting of the company's carbon dioxide emissions.
